

ALEX MERCER

Software Engineer | Full-Stack & Distributed Backend Systems

San Francisco, CA • (555) 019-2834 • alex.mercer.dev@email.com • linkedin.com/in/alex-merc-er-dev • github.com/alexmerc-er-dev

PROFESSIONAL SUMMARY

Results-driven Software Engineer with 2.5 years of experience architecting, developing, and scaling high-performance web applications, event-driven microservices, and cloud infrastructure. Proficient in modern JavaScript/TypeScript (React, Node.js), Python, Go, and AWS. Track record of optimizing API performance, database schemas, CI/CD automated pipelines, and developer experience in fast-paced Agile setups.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, Go, Java, SQL (PostgreSQL, MySQL), HTML5/CSS3
Frameworks: React, Next.js, Redux Toolkit, Node.js, Express.js, FastAPI, Django, GraphQL, REST APIs, gRPC
Cloud & DevOps: AWS (EC2, S3, Lambda, RDS, ECS, SQS), Docker, Kubernetes, Terraform, GitHub Actions, Jenkins, NGINX
Databases & Tools: PostgreSQL, MongoDB, Redis, DynamoDB, Git, Jest, Cypress, PyTest, Datadog, Prometheus, Grafana

PROFESSIONAL EXPERIENCE

Software Engineer | Apex Cloud Solutions

San Francisco, CA | Jun 2024 – Present

- Engineered microservices using Node.js, TypeScript, and AWS Lambda to process over 2M daily API requests with 99.95% uptime.
- Redesigned core data ingestion pipeline using AWS SQS and Redis caching, cutting P99 API response latency from 450ms to 180ms.
- Developed modular, accessible React components with Tailwind CSS for enterprise admin dashboard, boosting operational efficiency by 25%.
- Implemented automated end-to-end and unit testing suites using Jest and Cypress, increasing total code coverage from 68% to 92%.
- Migrated legacy PostgreSQL database schema to partitioned architecture, optimizing query execution speeds for datasets exceeding 50M records.
- Architected real-time WebSocket communication layer for multi-tenant monitoring application, supporting 10k+ concurrent active connections.
- Configured custom Datadog dashboards and alerting thresholds, reducing mean-time-to-detection (MTTD) for production incidents by 35%.

Associate Software Engineer | Nexus Tech Labs

Austin, TX | Jul 2022 – May 2024

- Collaborated with a cross-functional team of 8 to build a B2B SaaS web application using React, Express.js, and MongoDB.
- Authored secure OAuth2.0 and JWT authentication protocols, managing role-based access control (RBAC) across 50,000+ active users.
- Integrated Stripe payment gateway and automated subscription billing workflows, generating a 15% improvement in checkout conversion.
- Established CI/CD deployment pipelines utilizing GitHub Actions and Docker, reducing deployment cycle times from 45 to 10 minutes.
- Optimized heavy front-end asset rendering using code-splitting and dynamic imports, reducing initial bundle load size by 40%.
- Refactored legacy RESTful endpoints into GraphQL schemas, enabling client apps to query flexible data payloads and reducing over-fetching.
- Participated in daily Agile stand-ups, peer code reviews, and bi-weekly sprint planning to consistently meet strict project deadlines.

KEY PROJECTS

DevMetric – Real-Time Engineering Analytics Platform

GitHub / Live Demo

Technologies: Next.js, Python (FastAPI), WebSockets, PostgreSQL, Docker, AWS EC2

- Built a developer productivity tracker aggregating GitHub API data to visualize sprint velocity and code review metrics in real-time.
- Implemented WebSocket connections for live metric updates, handling 500+ concurrent connections with sub-100ms latency.
- Containerized frontend and backend services via Docker Compose for seamless localized setup and quick staging deployments.

Distributed Task Scheduler & Queue System

GitHub / Open Source

Technologies: Go, Redis, gRPC, Docker Compose

- Designed a lightweight distributed task execution engine in Go capable of scheduling and retry-handling for background jobs.
- Utilized Redis pub/sub streams to guarantee at-least-once message delivery and graceful worker node failover.
- Built an interactive CLI tool in Go allowing developers to inspect job queue statuses, purge failed tasks, and trigger manual retries.

EDUCATION

B.S. in Computer Science

University of California, Berkeley
Graduated: May 2022 | GPA: 3.8/4.0

CERTIFICATIONS

- AWS Certified Developer – Associate (2024)
- Certified Kubernetes Application Developer (CKAD) (2023)
- Meta Front-End Developer Professional Cert (2022)
